2 Januari 2018

Dear Mrs. Dewi Susanna

We would like to submit a new manuscript entitled "THE RELATIONSHIP MODEL AMONG OSH CLIMATE TO PREVENT NEEDLE STICK INJURY FOR NURSE" for consideration by the Kesmas: National Public Health Journal.

We confirm that this work is original and has neither been published elsewhere nor currently under consideration for publication elsewhere.

In this paper, we report on the model influence of health & safety climate consisting of attitude, norm and perceived behavior control (PBC) on performance through intention. This is significant because The need to raise the nurses' awareness to prevent the needlestick injury (NSI) based on Theory Planed Behaviour (TPB). The paper should be of interest to readers in occupational health and safety (OSH), NSI and nurses.

Health care workers, especially nurse are potentially be the subject of the danger and deadly Bloodborne pathogens through contaminated needlesticks, sharps, or splash incident. From the observational data, there were 68% of 100 respondents had needle injection injured, only 38% incident which were reported. It urges the safety intention in order to prevent NSI incident. This research would be a beneficial material for KESMAS Journal as a preventive action to enhance public health related to occupational health and safety area.

Please address all correspondence concerning this manuscript to me at ketut.ima.ismara@mail.ugm.ac.id.

Thank you for your consideration of this manuscript.

Sincerely,

Ketut Ima Ismara
